**Interwise leads field of 11 vendors in global test of voice/video over IP services**

**WEB CONFERENCING**

Publication Date: May 02, 2005

Text:

...voice, video and data are increased productivity, reduced costs and the ability to produce integrated **meeting** archives. We tested 11 Web conferencing services from test sites in Switzerland, the U.K...

... features. Out of 20 companies invited, we tested 11: Centra, Convoq, Elluminate, Face-to-Face Meeting, Genesys, Interwise, Linktivity, Macromedia, Raindance, VidiTel and WebEx Communications. Interwise's hosted Enterprise Connection Platform...

...Web conferencing service. It delivered a flawless performance every time we initiated a rich media **meeting** with people who had (and who hadn't) previously downloaded the software and offered optimal...

... the PSTN and VoIP participant voice qualities are indistinguishable and seamlessly mixed for any size **meeting**. Regardless how you choose to transmit voice, ECP Connect offers responsive desktop-, application- and file...

...VoIP as an option at the time of testing. Seven of the 11 also offer **meeting** recording (Face-to-Face **Meeting**, Convoq, Raindance and VidiTel do not currently archive meetings). Getting up and running to deliver the...

... specific extensions caused an issue with Elluminate and Centra when we tried to enter a **meeting** with non-Windows browsers. Administrator rights might be needed to make changes to client computers...

... and Java within browsers can heavily use temporary Internet files. If the application doesn't **automatically** manage the temporary file cache, users can hit a memory ceiling and encounter difficulties during...

... input devices (headsets and Web cameras) plugged into their PCs when they click on a **meeting** link. The result can be a lack of video or audio when entering a **meeting** with a platform that loads the media only at the start of one. Although we...

... network connectivity. (We discovered that if a user is disconnected during an iMeeting, the application **automatically** tries to renegotiate with the same or a different server on the peered network grid...

... first attempt, the longest set-up time required 8.5 minutes with Face-to-Face **Meeting**. We also found it irritating that WebEx required a partial re-install of the application each time a user or host enters a **meeting**. Special featuresOffering optional features (such as PowerPoint conversion and scheduling capabilities) in the form of...

...identifying user accounts. In both cases, the user is issued a seven- to 10-digit **meeting** code (the same number, the user ID and **meeting** code, is stamped on a plastic card mailed to the user) and a four-digit PIN.Getting people into a **meeting** at the appropriate time is critical to the success of a rich media conference. Services that support **meeting** scheduling (all those tested integrated scheduling through a portal or in conjunction with Outlook, with the exception of VidiTel and Face-to-Face **Meeting**) must always keep track of participant time zones. When populating an invitation for a **meeting** to be scheduled in the future, the service should ask what time zone the invitee...

... can be set once and saved on the server. In others, the invitation list is **generated** based on e-mail addresses, and there are neither time zones registered nor conversions offered...

... and resolve phone numbers and e-mail addresses.Most of the Web-based (service portal) **meeting** scheduling was simple to use, but in a few cases the numerous options made for...

... s presence (away, available, busy, offline) by monitoring and integrating his public instant-messaging service **buddy lists** and the enterprise IM/presence management systems in its main user interface, which resides in...

... a phone number. In one instance, after about 15 minutes we managed to begin our **meeting** but we were short a participant who only could attend for the first short period before needing to attend another **meeting**.To reduce the likelihood of a delayed **meeting** because of participant difficulties with the **meeting** software, Raindance **meeting** hosts can request live telephone customer support (an operator available via the integrated audioconference bridge) in 15 seconds or less. We found it easy to start an ad hoc **meeting** from Outlook or a slim dashboard application in Genesys, Raindance, WebEx, Linktivity, Macromedia, Convoq and Interwise. It also is very easy to start a conference if you and the other **meeting** participants have the Face-to-Face **Meeting** and VidiTel applications running. Perhaps reflecting their heritage in the large event and educational worlds...

... had to go through a portal (engaging a multistep process) to start any type of **meeting** in Centra and Elluminate.Services differ widely in their

ability to invite a new (ad hoc) participant into a **meeting** once the session has begun. We like the options Centra, Convoq, Raindance, WebEx, Face-to-Face **Meeting** and VidiTel offer to add a participant from within the application using an integrated IM invitation and the optional e-mail invitation. Genesys has a concept of an "Xpress **meeting**" from which ad hoc participants easily can be added by way of IM (but this feature is not available in the "normal" Genesys **meeting**). To invite someone when you are already in a Macromedia Breeze session, you must **generate** a new e-mail (Breeze provides a pre-configured template) or manually paste the URL...

... to invite someone in an ad hoc automated fashion when you are in an Elluminate **meeting** (you still have the option of pasting the URL into an IM or e-mail manually during the **meeting**). Behind closed doors As a matter of corporate policy or individual project needs, companies often have...

... services based on a comparison of the precautions offered by the services such as randomly **generated meeting** codes and passwords, the ability to lock meetings and require registration for entry. We didn't...

... SSL to encrypt session signaling and content. Servers for Centra, Interwise, Linktivity, Macromedia and WebEx **generated** a unique **meeting** ID for each **meeting**. Others, including Convoq, Elluminate, Linktivity, WebEx and Genesys, give the **meeting** host the option to require those invited to reply by e-mail to register for the session. We found that virtually all the services can set a **meeting** password for participant use upon entry, with the exception of Face-to-Face **Meeting** and VidiTel, which use a call-me method for initiating meetings. Genesys and Raindance have a waiting room where all **meeting** participants wait for the host to approve them before they attend the live **meeting**. Otherwise, we didn't find the level of security built into these two services very...

... services (including Genesys and Raindance) also let the host press one button to lock a **meeting** room, preventing new participants from entering until a **meeting** is unlocked. Beyond SSL, Face-to-Face **Meeting**, Interwise, Linktivity, Raindance and VidiTel add 128-bit encryption support. Others also might have additional...

... applications. As mentioned earlier, seven of the 11 services tested permit hosts to record the **meeting**. Because of this, it's possible that **meeting** contents can be leaked (or shared) after a **meeting**. We feel the ability to archive a **meeting** holds a great deal of promise for information worker productivity. And provided the assets are...

... don't believe this presents a significant threat or corporate security or privacy. In fact, **meeting**-recording features might help companies comply with federal or industry-specific regulations regarding fair disclosure...

... to see the same information. The audience members need an extremely simple interface while the **meeting** host interface must provide crowd management functions such as hand-raising and queuing of questions. The seminar or event usage model also benefits from having a **meeting** archive and replay system for participants who can't attend a **meeting** or want to review an archive. These same platforms subsequently are adapted to serve smaller...

... eMeeting, the user must push a button to talk. Convoq's moderator-controlled multi-party **meeting** feature also was challenging to learn and needs enhancements before it can compete with other...

... is speaking, and moderate (give and retrieve the podium and presenter rights). Face-to-Face **Meeting** and Convoq didn't have the speaker identification feature. White boards during collaboration allow for...

... menu. Centra lets a person adjust the refresh rate of the screen manually during a **meeting**. When the bandwidth is limited, this is a beneficial feature because a slower refresh rate...

... files (Macromedia's Flash file format) to show any type of media in the shared **meeting** space. All the services we tested with video-over-IP support also have the option of suppressing the video in one **meeting**, across a group of users or on the basis of a corporate policy. But collaborators...

... one person seen by all the others without providing that person full control of the **meeting**. When there are more than two participants and video is supported, the remaining services support...

... verbal reactions. We experienced the highest quality video and audio with the Face-to-Face **Meeting** service. The motion was fluid and the windows resizable. The application monitors bandwidth used against...

... and performs dynamic rate adaptation. We also really liked the way the Face-to-Face **Meeting** user can put a call on hold to take another incoming call. The application still...

... only one participant's video can be seen at a time, the video in Raindance **Meeting** Edition also offered very high quality. We like the way Macromedia Breeze offers the user...

... viewing parts of the screen). Managing everything Users can change individual account settings (name, phone number, **meeting** templates and the like) through portals or preference settings in a runtime application. In general, the services tested let users **generate** reports, including past conferences, participants in conferences, results of polls, statistics on archive accesses and...

... data. Looking ahead, account holders can use their service portals to view upcoming meetings and **create** new meetings. Integration with enterprise communications or workflow systems can greatly reduce overhead associated with...

... people who could be invited to an event or conference. VidiTel and Face-to-Face **Meeting** use e-mail name convention to identify participants, and Convoq relies on a mix of...

... policies on behalf of groups of users. Administrator account holders can modify global settings involving **meeting** archives, network bandwidth utilization, and telephone bridging services for participants who cannot join by VoIP. These same services also offer special fields for billing codes, and let you export **meeting** reports in formats suitable for accounting. Personal rich media conferencing through hosted services have matured...
